identaMaster®

Comprehensive Guide

www.identamaster.com
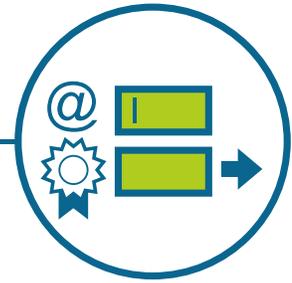

INSTALLATION

Congratulations!
You just ordered IdentaMaster® software package
featuring Biometric login, File/Folder Encryption
and Entire Drive Encryption.

From this point on, you may install any additional
IdentaMaster® plugins to enable other
biometric devices. Install a plug-in package, attach
its biometric device, and you will be all set.
Our 'plug-ins' are fully compatible with the
IdentaMaster® application and won't give you
any hassle.

Be sure to check our site for new offers.
You may add other biometric plug-ins
and scanners at any time.

2

LICENSE ACTIVATION

Once installed, you will be prompted to enter IdentaMaster® Application License key and email address. After that, you will be prompted to enter Plugin License key.

You will be able to start using IdentaMaster® features once activation is complete.

! Note! If you purchase another biometric plugin's license, go to the 'Licensing' tab, select 'Update' and re-enter the new license.

3

TESTING SCANNER

If you properly installed a biometric plug-in, its scanners can be tested in the "Test Scanner" panel. A properly connected device will show a fingerprint image on the right.

Don't forget place your magic finger on the scanner surface!
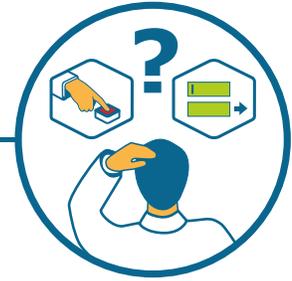

4

REGISTERING USER ACCOUNTS

Select the "User Enrollment" tab to register a particular windows account you would like to enable with biometrics.

While doing this, select logon mode – "password and /or biometrics" and re-enter the user account's password.

Note: If you change your windows account password, it needs to be reentered.

5

AVOIDING LOGON ISSUES

To avoid potential login issues, it is best to select the "Password or Biometrics" option. This allows you to access the user profile using your password in case biometric enrollment is not successful.

6

BIOMETRIC ENROLLMENT

You can now begin user enrollment. Go to the "User Enrollment" tab, pick the user, and select "Update enrollment", choose the biometric provider you want to use – depends on available biometric technology enrollment procedure may be different. Please read our manuals 'HOW TO ENROLL USER'S BIOMETRIC PROFILE'.

You will find it on the 'Learning Center' page of our site identamaster.com/pro.

7

ENCRYPTING FILES
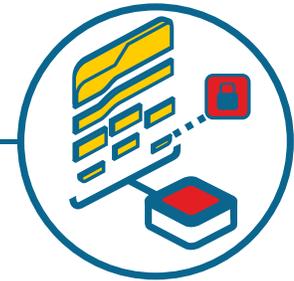

To encrypt files or folders, right-click on them
and select 'Biosecure' from the drop-down menu.
Once encryption is completed, the file will be saved
with the extension .izbiosecure.
While setting up encryption, you can choose
to keep the original files as well as delete them.

Note: You may store encrypted files on
any platforms (Dropbox, Google drive, etc).
Only you can decrypt your files with
our wonderful IdentaMaster®!
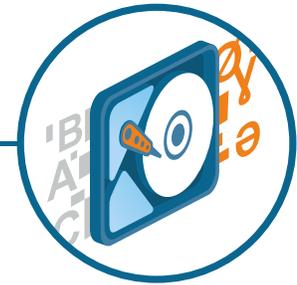

8

DECRYPTING FILES

Decrypting an encrypted file is done
in the same way.
Right-click the file and select 'Biosecure'
to begin the decryption process.

9

ENTIRE DRIVE ENCRYPTION

If you have a drive, partition on drive or USB storage device, you will take advantage of IdentaMaster's Drive encryption solution. IdentaMaster seamlessly integrated with Microsoft technology built into windows. HD volumes will be strongly protected, meaning only permitted user would unlock it and get access to its resource after passing biometric authentication. By login on that PC with IdentaMaster's biometrically enabled capabilities and passing biometric authentication, external drive will be immediately unlocked for update. After signing off, that drive locked up again, so no one beside administrator and assigned users access it on that PC or any other PC.

10

NOT JUST FINGERPRINTS?

We are regularly updating our site to include other available biometric factors (such as finger vein or palm reader technology). We will also be adding other factors such as iris, voice, and facial recognition.

USING BIOMETRICS HAS NEVER BEEN THIS EASY!
